

THREE DELIVERY OUTCOMES

CONTEXT

Claude knows your goals, role, and constraints before you type a word — every session informed

SKILLS

Repeatable capabilities on demand — research, diagrams, memory — consistent, composable, shareable

AUTOMATION

Commits, logs, and alignment tracking happen without you — output accumulates while you work

AUTOMATION CATALOGUE · 9 SKILLS · DEPLOY ANY · EXTEND ALL

research-brief

Web research → briefing

process-diagram

Text → draw.io diagram

voice-profile

Consistent writing voice

learning-os

KB capture + recall quiz

financial-os

Portfolio tracking + FIRE

lens-synthesis

Filter intel through lenses

life-lens

Personal alignment filter

apple-calendar

Natural language → Calendar

apple-reminders

Natural language → Reminders

SKILL DESIGN PATTERN · SWAP THE DATA · KEEP THE WORKFLOW

SKILL.md

WORKFLOW · Blueprint only

Steps, triggers, quality rules.
Portable and auditable.
Swap references/ — skill is intact.

scripts/

CODE · Execution layer

Python or shell invoked by the workflow. Separately testable. No persona data.

references/

DATA · Persona layer

Paths, lenses, targets.
Change without touching the skill. Safe to share.

TIME TO VALUE · OPERATIONAL SAME AFTERNOON

1

Fork the repo

2 minutes

github.com/dc3108-2024/

2

Fill CLAUDE.md

30 minutes

Context · goals · domain

3

Install hooks

10 minutes

settings.json.example

4

Deploy first skill

60 minutes

_template/ as starter

5

Add a loop

When ready

EXTENDING.md · 3 patterns

LIFECYCLE VIEW · WHAT HAPPENS WITHOUT YOU

SESSION START

Your profile loads before you type —
CLAUDE.md identity + MEMORY.md index
last session handoff surfaced

DURING SESSION

Skills invoked by trigger phrase —
SKILL.md loaded + followed exactly
Python scripts run inline via Bash

SESSION END

PostSessionStop hook fires —
transcript scanned for goal signals
life-lens filter updated if needed

BACKGROUND

Cron jobs run on schedule —
PostToolUse auto-pushes to GitHub
loops maintain shared KB state

COMPOUNDING VALUE · EACH LOOP RUNS ONCE · THEN MAINTAINS ITSELF

1

Briefs → KB

Brief skill calls second-brain-sync on close · extracts named patterns, not news
→ KB grows automatically · no manual capture step · 3 entries per brief run

2

Session → Alignment

PostSessionStop hook fires session_lens_sync.py after every session
→ goal-shift signals detected · values filter updated in real time · no manual revision

3

KB → Research Bias

Weekly cron scans KB, counts entries per subdirectory, classifies sparse vs dense
→ writes kb-frontier.md · any skill reads it at Step 0 to target underserved areas

ADOPTION PATH · SCAFFOLD TO PRODUCTION

SCAFFOLD

Day 1

Identity loaded · hooks wired
2 example skills working

INTERMEDIATE

Month 1

Domain briefs running daily
KB growing · MCP integrations

ADVANCED

Month 3+

Composable micro-skills
System compounds without prompting
